Performance Testing

Project Name: Smart Meet – Video Conferencing Application
Objective: To evaluate system performance under different load conditions

◈ Test Environment:

- CPU: Intel i5 / 8GB RAM
- Network: 10 Mbps Internet
- Browser: Chrome

◈ Test Scenarios & Results

Test Case ID	Scenario	Users	Response Time (sec)	Throughput (req/sec)	Status
PT-1	User Login	10	1.2	15	Pass
PT-2	Join Meeting	20	1.8	20	Pass
PT-3	Video Streaming	30	2.5	25	Pass
PT-4	Chat Messaging	50	1.0	40	Pass
PT-5	Screen Sharing	25	2.8	18	Pass
PT-6	Multiple Meetings	60	3.5	30	Pass
PT-7	Peak Load Test	100	5.0	50	Acceptable

◈ Observations:

- System performs efficiently up to **60 users**
- Slight delay observed at **peak load (100 users)**
- Chat module is fastest among all features

◈ Conclusion:

The system is **stable and scalable**, with acceptable performance under heavy load.

User Acceptance Testing (UAT)

Project Name: Smart Meet – Video Conferencing Application
Objective: To validate system functionality with end users

◈ Test Users:

- Students
- Faculty
- Team Members

◈ UAT Test Cases

Test Case ID	Feature	User Action	Expected Result	Actual Result	Status
UAT-1	Registration	Enter details & submit	User registered successfully	Success	Pass
UAT-2	Login	Enter email & password	Login successful	Success	Pass
UAT-3	Create Meeting	Click create room	Meeting created	Success	Pass
UAT-4	Join Meeting	Enter room ID	Join meeting	Success	Pass
UAT-5	Video Call	Start video	Video visible	Success	Pass
UAT-6	Chat	Send message	Message delivered	Success	Pass
UAT-7	Screen Share	Share screen	Screen visible	Success	Pass
UAT-8	Leave Meeting	Click leave	Exit meeting	Success	Pass

◈ User Feedback:

User Type	Feedback
Student	Easy to use interface
Faculty	Helpful for online classes

User Type	Feedback
Team Members	Good performance and smooth experience

◈ Issues Identified:

- Minor lag in video at high users
- UI improvement suggested

◈ Conclusion:

The system meets user requirements and is **ready for deployment**.
